STALLION.AI

EXECUTIVE SUMMARY

stallion.ai

Accessible, risk-conscious insights.

From opportunities for growth to risks in play, AuditMap paves a path to risk-conscious decision making. By unlocking the wealth of high-value information contained in internal audit deliverables, the solution bridges your enterprise risk environment to your business's objectives.

The Product
Actionable risk intelligence from documentation.

Our discovery tool distills risk management knowledge normally held in your documentation by identifying key statements of interest (r isk, controls, and more) and providing you an easy-to-use interface to explore them. With AuditMap, you can:

- **Dive into your business risk landscape** and support your decision-making rationales. Innovating in tightly regulated industries requires a constant outlook to procedures and compliance. Knowing past and present exposure at-a-glance sets the stage for future-facing management decisions.

- **Study characteristics and performance** over time of documented areas within the organization. By quantifying coverage, maintaining involvement in enterprise risk culture becomes an accessible task for executives and managers alike.

- **Explore, categorize and compare key statements** (risks, controls, findings, and more) in an interactive environment defined by your business structures, risk areas, and Enterprise Risk Management Frameworks.

On-premise and cloud deployment options.

Designed with data security in mind, AuditMap can be deployed on-premise without the need for outside connectivity. A cloud deployment option is also available for remote teams.

Status & Outlook of Software Development

AuditMap's core functionalities are built and operational. Development is now expanding features, and customizations for industry-specific use cases. Those currently underway include:

- A continued development of the Executive-suite dashboards for faster, in-depth analyses of the corporate risk landscape;
- Exporting Risk-to-Control Matrices; jumpstarting risk managers' work from exploration to a first draft.
- Advanced detection of findings, recommendations, observations, and more;
- Additional risk framework templates, including PEFA, ISO 31000, and more.

The Opportunity

Stallion.ai presents an opportunity for the integration of artificial intelligence in the new generation of risk management workflows. **Enhancing your risk management functions by keeping their focus on delivering forward-facing value.**
